

SkyPower Achieves Commercial In-service Designation for North America's Most Easterly Wind Power Project

Toronto, ON (July 2, 2009) - SkyPower Corp. (SkyPower) announced today that Newfoundland Labrador Hydro (Hydro), a Nalcor Energy company, granted commercial in-service certification to the company's 27 megawatt (MW) Fermeuse Wind Power Project located in Fermeuse, Newfoundland. The designation became effective June 30, 2009. The Fermeuse Wind Power Project's coastal location makes it North America's most eastern located wind power project.

"No one is more important than our stakeholders and that relationship is evident in the warm acceptance we continue to receive for the Project from Fermeuse and neighbouring communities," said Kerry Adler, Chief Executive Officer, SkyPower. "The in-service certification officially commemorates commercial operation, and allows SkyPower to generate a brighter future for our eastern stakeholders."

The Fermeuse Wind Power Project consists of nine 3.0 MW, V90 Vestas wind turbines, and the Project will supply enough electricity for approximately 7,000 households.

"Newfoundland and Labrador has a world-class wind resource that is being leveraged for the benefit of electricity customers. The Fermeuse Wind Power Project will bring more clean and cost-effective power to Newfoundland and Labrador further reducing air emissions and helping the environment," said Jim Haynes, Vice President of Regulated Operations, Newfoundland and Labrador Hydro. "We congratulate SkyPower on achieving this milestone designation."
